PRODUCT OVERVIEW

The 24×26 Adjustable Plastic Column Formwork System is a versatile modular solution for forming square and rectangular concrete columns in modern construction projects. Manufactured from high-strength ABS and PP, its adjustable height configuration and precise interlocking design ensure accurate column dimensions and a smooth concrete finish with every pour.

OPTIONS & CUSTOMIZATION

- **Color:** Black or White
- **Height:** Adjustable — standard height sections
- **System:** Compatible with standard column clamps

KEY FEATURES

ADJUSTABLE HEIGHT

Modular sections stack to form concrete columns at any required height.

ABS + PP CONSTRUCTION

High-strength lightweight materials for precise and durable column forming.

SMOOTH CONCRETE FINISH

Leaves a clean smooth surface — reduces post-pour finishing requirements.

200+ REUSE CYCLES

Easy to strip and reuse — significant project cost savings over many pours.
